

Bespoke Eco-Homes

Our custom SIPs structures are designed to meet the unique needs of each individual client.

We specialise in creating one-of-a-kind units for self-builders.

We also cater to developers looking for multi-unit sites.

Our focus is on delivering high-quality, tailor-made structures that exceed expectations.

High Performance

SIPs support a fabric-first approach to building structures by focusing on reducing a home's heat loss, you can achieve a low-carbon, sustainable house that's affordable to heat.

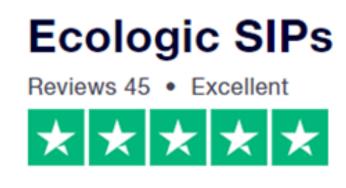

It's really about maximising the insulation and airtightness, managing solar gain through screening/shading and solar reflective glass, careful design of cross ventilation, and minimising thermal bridging with our premodeled details.

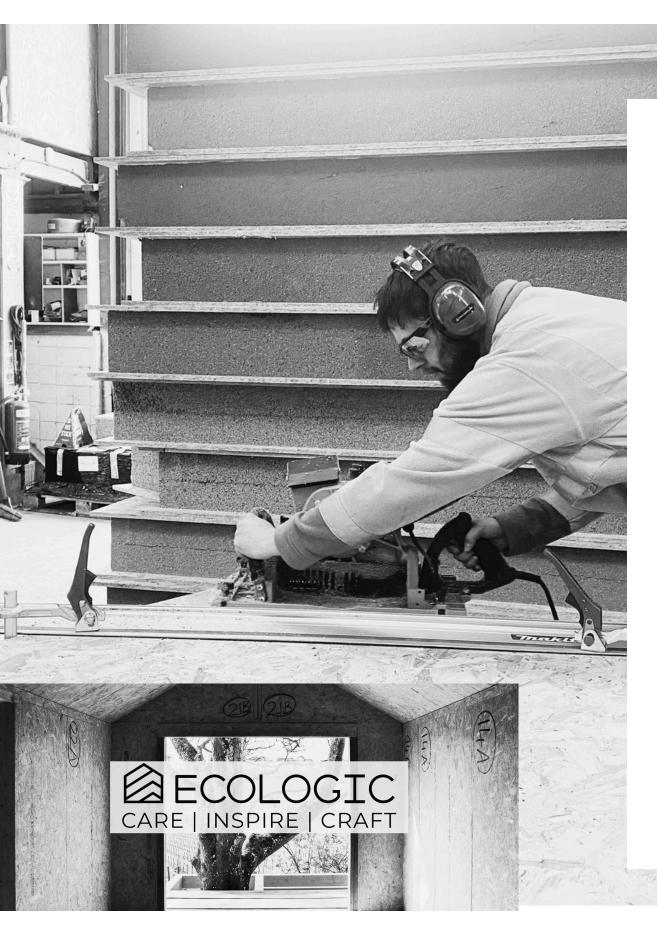

It's no surprise that **developers** see them as a great choice for **multi-unit schemes**. As both homebuyers and the UK Government are increasingly seeking more sustainable building options and lower ongoing energy bills, our SIPs offer developers an exciting new alternative to satisfy clients' needs of the future.

Our SIPs are designed and produced in-house at our **New Forest Workshop** with the highest level of precision, safety and quality - to ISO9001 and Structural Timber Association Gold Assure Member standards.

Inspired by the natural world and the rich heritage that surrounds us, our team is committed to exceptional craftsmanship and to using sustainably harvested timber

Our bespoke design and cutting system ensures that waste is kept to an absolute minimum and, where possible, any excess materials are recycled or repurposed on smaller-scale projects.

In a streamlined process, our workshop technicians cut, stack, and accurately number each panel wall by wall and roof by roof.

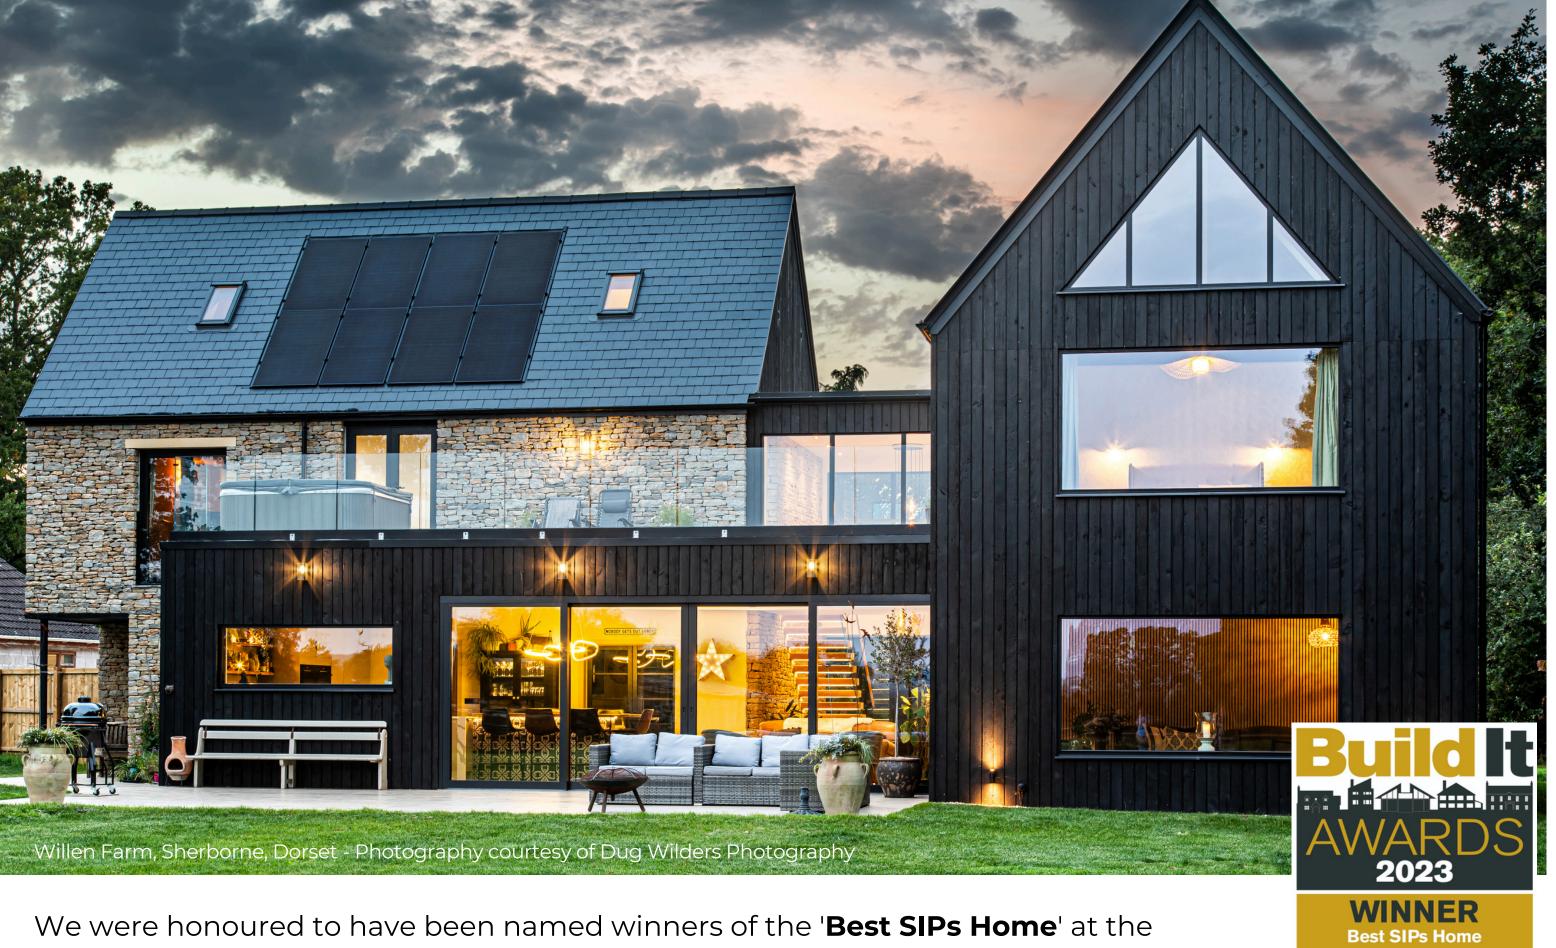

Over the past two decades, our passion for design-led eco-buildings has grown.

With exceptional expertise and indepth knowledge, our team designs resilient, low-impact structures from scratch or to your own specifications.

If your project has been designed with traditional construction methods in mind (eg. cavity walls), we can easily re-engineer the drawings to create a more sustainable SIPs structure often winning increased internal floorspace in the process.

All clients are invited to our New Forest SIPs design Studio to approve drawings in 3d.

We were honoured to have been named winners of the 'Best SIPs Home' at the prestigious Build It Awards 2023. This award gives us the motivation to continue to strive for excellence in what we do and to move more home builders away from using masonry and towards more modern methods of construction (MMC) like SIPs.

Everyone in our team shares a real sense of adventure and a love for the natural world.

From our bio-climatic designers and craftsmen builders to our construction crews and project managers, we all believe in inspiring change within the building sector in a bid to become more sustainable.

Why Ecologic?

We are SIPs specialists, offering our customers:

SIPS engineered and manufactured in UK to the highest standards

Independently tested products meeting latest Building Regulations Parts L and Q

Customised and bespoke SIPs design and structural engineering

Clear detailed estimates to provide cost control and certainty

Comprehensive technical surveys to ensure compliance with Building Control

Liaison with architects and contractors

A dedicated project manager and contracts manager

Expert installation by STA certified carpentry teams

Ecologic 10 year warranty and support

Ecologic SIPs
